SUMMARY
Recent years have seen a series of projects to address the lack of understanding and knowledge of sites in Wales which relate to the conflicts of the Twentieth Century. In 2015 the first assessment of Military Camps and Ranges was carried out looking at the county of Carmarthenshire (Pyper 2015). The focus was camps and ranges established and in use during the Second World War and succeeding years. This follow-up report applies the same criteria to former county of Cardiganshire, now Ceredigion.

This is the first phase of work, a desk-based assessment, gathering documentary sources including primary and secondary sources to establish the number, type, location and extent of sites. A range of site types have been considered and include; military ranges, military camps (British and American), hospitals, prisoner of war and resettlement camps, depots and land army camps. **Five sites** were recorded in the HER at the outset of the exercise, these have now been updated and a further **48 new sites** have been added to the record. Where possible aerial photographs have been used to establish the extent of the camps or ranges and these have been mapped onto MapInfo GIS. The information from this assessment will contribute to our understanding of the impact of the 20th century conflicts through its archaeology and surviving structures. It will provide a basis for follow-up fieldwork to assess national or regional significance of surviving archaeological remains and also provide information for heritage management and development control purposes.

INTRODUCTION
This study of Camps and Ranges in Ceredigion forms part of a phased programme of work being undertaken by the Welsh Archaeological Trusts, addressing the lack of information on the archaeology and historic environment which stems from the conflicts of the twentieth century. Cadw have grant-aided the investigation of various classes of site across Wales, and within Dyfed, Military Airfields and their dispersed sites, crashed Military Aircraft sites, scoping exercises to investigate the archaeology of the First World War, and now a desk-based assessment on Camps and Ranges within Carmarthenshire, have so far been addressed, (Cadw 2009, 4, Pyper 2012, 2013a & b, 2014a & b, Pyper 2015). It also builds on the work carried out during the Defence of Britain programme, co-ordinated by the Council for British Archaeology.

The project addresses several of the themes and sub-themes identified in the research agenda of **Modern Military Matters** (Schofield 2004, p14), which acknowledges that Camps are one of the least studied categories of site and the difficulty of establishing overall figures for the numbers of camps established. This assessment takes into consideration any military established base or range and includes the army, air force and naval camps and ranges which vary in scale. Thus, the range of sites in this class is vast including; military camps, ranges including training facilities for small arms or weapons testing and any associated structures, smaller camps associated with searchlight or anti-aircraft batteries, hospitals, prisoner of war camps, internment camps, resettlement camps, temporary camps for American troops prior to D-Day, Home Guard headquarters, camps and training areas and also camps for Conscientious Objectors, the Women's
Twentieth Century Military Sites: Second World War and later Camps and Ranges

Land Army, etc. This report constitutes the first stage, a desk-based assessment, to be followed by site visits to record surviving remains.

This study is not addressing camps established prior to, or during the First World War associated with the Yeomanry and Territorial Forces, as these will be assessed through the on-going First World War project. This report concentrates on the massive military expansion and mobilisation which took place immediately preceding and during the Second World War, those camps and ranges which continued in use in post war years and sites in continued military use. Many of these sites were temporary and rapidly constructed, and many with only a basic infrastructure provided. In other cases existing buildings, often large houses, were requisitioned to serve as headquarters with personnel billeted in the house and other temporary structures erected within the grounds.

The history attached to each of the sites varies, with many different units and nationalities moving through, perhaps only for a short period of time, which is recorded through various War Diaries held in the National Archives including those of the Carmarthen Sub Area Headquarters (WO 166/6729 & 1270) and Lampeter Command Supply Depot (WO 155/5155).

Some sites continued in use beyond the end of hostilities, many prisoner of war camps were not decommissioned until the late 1940s (Hellen 1999, 191). Occasionally some sites continued in use through the Cold War and continue in use to this day. The report focusses on sites that are, or have been owned, leased or licensed by the military, and not extensive areas of private land which have been used for military training (TOPL; Training Over Private Land).

The information collated in this report will contribute to our understanding of the impact of the 20th century conflicts through its archaeology and surviving structures, provide a basis for follow-up fieldwork, and provide information and advice for heritage management purposes and for development control and forward planning in Local Planning Authorities.

PROJECTS AIMS AND OBJECTIVES

The projects aims and objectives are set out in the Dyfed Archaeological Trust Cadw Grant-Aided Programme Project Proposals 2015-16;

The overall aims of the project are:

- an application of definition, classification, quantification and distribution of these sites in Carmarthenshire,
- an assessment of the archaeological significance of these sites in both a regional and national perspective,
- an assessment of the vulnerability of this element of the archaeological resource,
- recommendations for scheduling and listing

These aims will be fulfilled following the fieldwork assessment in part two of the project.
**Twentieth Century Military Sites: Second World War and later Camps and Ranges**

**The desk-based assessment’s objectives are:**

- To access and assess available primary and secondary sources for each of the camps and ranges within Ceredigion,
- To incorporate this information into the Dyfed Archaeological Trust’s Historic Environment Record (HER), creating new sites or enhancing existing ones,
- To create GIS polygons to be supplied for heritage management advice.

**METHODOLOGY**

The way in which this project has been approached mirrors that of previous threat related projects undertaken by the Welsh Archaeological Trusts with grant-aid from Cadw. Maps, plans and aerial photographs were consulted for each site. Records were created and new point and polygon-based GIS data compiled as a result of the research. This information is now integrated into the regional Historic Environment Record and is available through the HER and through the Archwilio website.

The following methodology was adopted to achieve the project’s objectives:

- An assessment of existing records within the HER,
- An assessment of existing records within the NMR / Coflein,
- An assessment of the records held in the Defence of Britain archive,
- A rapid overview of sources during a visit to the National Archives,
- An assessment of records held at the local records office, in this case Ceredigion Archives,
- An assessment of records and aerial photographs at the National Monument Record,
- An assessment of the digital records held at Fold3.com, a web-based collection of original US military records, including many from the U.S. National Archives,
- Assessment of data listed in secondary sources, on the internet or hard copy local histories and memoirs,
- Assessment of wartime and later aerial photographs,
- Creation of new records and enhancement of existing records in the HER,
- Production of a short report including a gazetteer of sites.

The National Archives and Ceredigion Archives Service were visited to consult primary sources and also the Royal Commission on Ancient and Historical Monuments of Wales.

A number of key secondary sources were the basis for the assessment, including reports by John Schofield (2006) *England’s Army Camps* and Roger J C Thomas (2003) *Prisoner of War Camps (1939-1948)*. These provided a gazetteer of known sites throughout the UK based on previous desk-based research at The National Archives.

Increasingly on-line sources are available with many groups or individuals publishing on the internet or transcribing historic documents on websites or webpages. Whilst this increases the range of sources available for consultation each has to be assessed in terms of its historical accuracy. Any references to these records are sourced in the individual site records with their corresponding Uniform Resource Locator (URL) to access the appropriate page on the internet.
All sources consulted are referenced in the individual site records.

SITE DEFINITIONS
The following site definitions were identified in the earlier Carmarthenshire study but a couple of additional site types have been added following the assessment in Ceredigion.

The primary focus for this assessment has been military installations where armed forces have been established for a permanent or temporary base. Site types and their definitions are derived from the Thesaurus of Monument Types for Wales, which is based on the Defence of Britain thesaurus definitions. The key site types identified in this study have been:

- Military Camp: a site where a body of troops is temporarily or permanently lodged, with or without entrenchments and fortifications.
- Firing Range: A piece of ground over which small arms or large artillery may be fired at targets.
- Bombing Range: An area of land, with associated buildings and targets, used for practicing the dropping of bombs and other aspects of air warfare.
- Military Base: A building or group of buildings, often surrounded by a system of fortifications, used as a residential and training site by members of an armed force.
- Military Installation: Buildings, structures and sites created for military purposes.
- Military Depot: A building or group of buildings, often enclosed by a system of fortifications, used by an armed force for the storage and distribution of military equipment.
- Military Hospital: a hospital for the medical and surgical treatment of military personnel and/or their families.
- Prisoner of War Camp: a prison site for the containment of servicemen captured in war.
- Depot: a place of deposit for the storing of goods. May include a complex of structures.
- Barracks: a building used to accommodate large numbers of individuals, often on a temporary basis, in the armed forces or at industrial sites.
- Military Headquarters: a building used as a command centre for a military operation.
- Resettlement Camp: A camp for the temporary accommodation of uprooted civilians or foreign ex-service personnel, who had fought for the British forces during WWII (e.g. Polish).
- Weapons Testing Site: Buildings, sites and structures associated with the demonstration and testing of weapons and military equipment.
- Rocket Test Facility: An area for the testing of rockets and guided missiles. Includes all structures associated with both the firing and testing of rockets and missiles.
- Observation Post: A building or site for watching specific military activities or the movement of enemy forces, etc.
- Women’s Land Army Hostel: A building used to provide accommodation for women working on the land during the First or Second World Wars, also including Women’s Timber Corps.
• Women’s Land Army Camp: A temporary settlement of tents or huts established to accommodate women working on the land during the First or Second World Wars, also including Women’s Timber Corps.

Sites could include existing buildings which were requisitioned, or the construction of new temporary or permanent buildings, or canvas tents, which were erected for the duration of hostilities.

The guiding principal in recording sites has been those areas where military training or installations may have left an archaeological footprint and the location can be reasonably accurately identified.

Many of the sites identified have a complex history and it has not been possible to be absolutely sure of different phases of activity during the scope of this project. Further desk based research in the local archives or the National Archives may reveal their narrative histories.

Some documentary sources – for instance War Diaries or United States Army station lists - often associate military units by town or village but do not provide location information. Wartime documents record Cassini Grid references though not usually to a greater accuracy than a four figure reference, where possible these have been converted to identify with reasonable accuracy their location.
RESULTS

Prior to the assessment being carried out 5 records for camps, ranges and military installations were recorded within the HER:-

Table 3: Table of site types represented

Military Camps
Seven Military Camps have been identified within Ceredigion. There are records of US army bases at Highmead (PRN 105982), Cilgwyn (PRN 107901), St Dogmaels (PRN 107902), Aberporth (PRN 105926) and Llanybydder (Station Lists 1943-44), though the location of the base at Llanybydder, is unidentified and it is suspected that Highmead was the base, and perhaps other troops were billeted in the town. US army tank training also took place at Ysbyty Ystwyth (PRN 107897), (Jones 2007). Other camps include Aberaeron (PRN 102533) and Ynyslas (PRN 109285) which provided accommodation for the anti-aircraft school and rocket test facility respectively.

It is clear from the War Diaries recording the movement and supply of troops that many were also based in billets in Aberystwyth, Cardigan and Lampeter (WO 166/5155), however as yet no definitive locations have been identified.

For the purposes of recording the sites in the HER, ‘Military Camp’ has been used where there is evidence that the camp has been used by more than one of the military services ie. the Army and RAF, ‘Army Camp’, has been used where just the Army was accommodated. For the purposes of the HER their function remains the same.

Histories, as far as research has allowed at this stage, are described within each record description and are sourced within the individual HER records. Some military camps demonstrate a different phase of use, however this can be seen only at RAF Aberporth, where the airfield accommodation camps became Resettlement Camps for the Polish Army (PRNs 30592 and 30595).

Ranges; Bombing and Firing
Ranges are areas of land reserved for hazardous firing and training; they may be permanent or temporary (MOD 2011, p1). Depending on the usage of the ranges, accommodation for troops or training staff in associated military camps or bases might be present. Equally where troops were temporarily accommodated you would expect a range to zero and test small arms.

An Anti-aircraft firing range at Aberporth has been recorded (PRN 109288) as distinct from the weapons testing range adjacent to it (PRN 107896), this definition was possible due to map sources which indicate an early distinction in the two different functions of the headland, in post war years this boundary has vanished with the whole site being subsumed into one.

Although a number of 19th century rifle ranges are known in Ceredigion, only one has been identified which was brought back into use during the Second World War after a period of abandonment (PRN 109260).
Prisoner of War Camps

One Prisoner of War Camp has been identified in Ceredigion, that is No 70 Henllan Bridge Camp (PRN 31428), famous for being an Italian POW camp from 1943-46 when one of the huts was transformed into a decorative Italian chapel, painted throughout. This building is recognised as significant and is a listed building Grade II* (PRN 57791). From 1946-48 it became a German Working Camp, (Roger JC Thomas, 2003)

Military Headquarters

Five headquarters have been recorded. At Aberaeron there is an HQ associated with the Camp and Anti-Aircraft school (PRN 102533) which was based inside the nearby farmhouse and buildings (PRN 109286). The mansion of Cilwenged was for a time the headquarters for the Aberporth Projectile Development Establishment (PRN 109286). In addition 3 Headquarters (PRNs 109303, 109304, 109305) are listed in the published account of the 3rd Battalion Cardiganshire Home Guard book (Davies and Lloyd, 1945), probably in requisitioned buildings at Lampeter, Cardigan and Aberystwyth, but their locations are unknown.

Military Base

In the Thesaurus of Monument Types for Wales ‘Military Base’ is a higher level classification than ‘Military Camp’. Where known a more specific site type has been used.

Military Installation

This term has been used as a higher level site type where a more specific one wasn’t appropriate – in this case a balloon base for launching a target balloon in association with the research and testing at Aberporth (PRN 109261).

Observation Post

A number of observation posts have been identified in connection with the military weapons test site at Aberporth (PRN 107896). These are positioned along Cardigan Bay and extend as far as Strumblehead (PRN 109276) in the south, over to Pencader in the east (PRN 109262) and on the Llyn Penninsula in the north. These are all related to tracking and measuring trajectory of missiles launched from the range at Aberporth. There are over thirty mentioned in the Royal Aircraft Establishment papers in the Ceredigion Archives but only 24 locations have been successfully identified. Many of them date from different periods of use and different systems being tested at the time and so represent an archaeological legacy of military research and development. In addition 3 Observation posts (PRNs 109306, 109307, 109308) are listed in the published account of the 3rd Battalion Cardiganshire Home Guard book (Davies and Lloyd, 1945).

Weapons Test Site and Rocket Test Facility

Both Aberporth (PRN 107896) and Ynyslas (PRN 94906) are sites which are highly significant and important, representing unique research and development during the Second World War, which at Aberporth has continued in use through the Cold War and up to the present day. At Ynyslas the site was in use for a limited time from the end of the war and immediately after and as such
represents a snapshot of time, whereas at Aberporth there is a long and complex history of use, reuse, adaption and modification to meet the needs of the new technologies being tested. An element of this, the simulated ship firing platform (PRN 107900) has already been recognised as of national importance and is a Scheduled Ancient Monument.

Resettlement Camp
The facilities at RAF Aberporth when the airfield closed in 1946 where reused for the accommodation of the Polish Army (PRN 30952, 30595). This is the only resettlement camp which has so far been identified within Dyfed.

Miscellaneous sites
No sites have been established for Bombing Ranges, Barracks, Women’s Land Army or Military Hospitals. No depots have been identified in Ceredigion, though a Command Supply Depot is recorded in Lampeter, its location remains unknown. No Naval installations have been identified within the county.

DISCUSSION
Sources
A range of sources have been drawn on to attempt to assess the range of sites in the county. Primary sources include those seen at both the National Archives and local archives. Held at the TNA, the War Office Diaries help to give an indication of the activity within the county during the war (WO166/1270, WO166/5155, WO166/6729). They do not provide details of specific locations or descriptions of sites, however they are helpful in signposting areas in which to explore further. Similarly, the Report of the Committee on the Concentration of War Department Buildings and Land in Great Britain 1956 (WO163/633) lists the properties held by the military at that time. Other documents in the National Archives refer to specific activities at different locations such as the movement of the MOS Experimental Establishment Ynyslas to Aberporth in 1946 (AVIA 48/15). A narrative history of the 3rd Battalion Cardiganshire Home Guard, published in 1945, gives a good account of the activities of the Home Guard, together with a plan showing territories. It is however exact locations of the headquarters (PRNs 109303, 109304, 109305) and observation posts (PRNs 109306, 109307, 109308) have been difficult to pinpoint with accuracy.

Ceredigion Archives hold an extensive bundle of papers relating to the Royal Aircraft Establishment Aberporth (PRN 107896) including a number of useful maps of the range. These provide an extent of the range, but also a snapshot at various points of the buildings and structures at the time. The complexities of phasing within the range and the adjoining Anti-Aircraft practice camp have not been fully teased out at this point and further work is required to understand the different activities going on at different times and the significance of any surviving archaeological remains. In addition the papers on Aberporth revealed the extensive number of Observation Posts built at
various locations along the Cardigan Bay coastline in order to track the trajectory of missiles being tested.

Aerial photographs are an essential source of information for many sites and have been particularly helpful in locating the extent of sites, such as the Camp and Anti-Aircraft school at Aberaeron, and where there is little or no documentation for sites. The National Monuments Record and the Central Registry for Aerial Photography in Wales have been very useful in supplying the relevant images.

Secondary sources vary, Schofield’s report on Army Camps and the gazetteer have provided a signpost to the WO163 documents in the TNA though only Aberaryon (sic) and Aberporth are listed (Schofield 2006). As discovered when carrying out the Carmarthenshire camps assessment information on US camps is relatively accessible. The official history, ‘Western Base Section’, completed in 1947 provides a list of US army camps, available through the internet archive service ‘Fold 3’ https://www.fold3.com/. In addition station lists have been transcribed and digitised by Lt Col Philip C. Grinton; US Army (Retired) who has documented the locations of various units month by month from September 1943 to December 1944. However, locational details are limited to four figure Cassini grid references which is problematic in the absence of other documentary sources. Websites have also been valuable particularly with reference to specific sites, such as Aberporth http://www.rafaberporth.org.uk/ and the recollections of troops staying in St Dogmaels https://wwiitracings.wordpress.com/.

The SSD 559 ranges map is a key source for showing Aberporth and Ynyslas ranges in operation in 1945.
Archaeological potential
Table 4 below summarises the likelihood and potential significance for archaeological remains at each of the sites identified. Three categories of potential have been shown, those for ‘Upstanding Remains’ which includes either buildings, huts or other built structures, ‘Below Ground’ remains which includes hut platforms, ground works and services, earthwork banks and monuments etc. The third category is ‘Associated Ephemeral Remains’ which might include artefacts or unstratified remains, and graffiti or aborglyphs (graffiti carved into the bark of trees) the latter of which are becoming more widely recognised and particularly common in military contexts associated with parkland.

For each of these categories sites have been assessed; confirmed, high potential, probable, possible, unlikely, or none, based on the current level of information available.

</tbody>
</table>
The table summarises each site on the basis of archaeological potential and offers priorities for further investigation and visits. It’s worth highlighting those issues which need to be addressed in future work; perhaps the most significant sites within the county are both Ynyslas and Aberporth where there is a high archaeological potential for upstanding structures, buildings and also buried archaeological remains and because both have been involved in unique research and development weapons testing they have the potential to encapsulate nationally significant archaeological remains. Ynyslas has benefitted from research and investigation by the RCAHMW could form the basis for future recording and assessment which could potential lead to statutory protection.

Other sites which would repay further investigation are the hutted camps at Aberaeron (PRN 102533) and Highmead (PRN 105982) where there is a possibility of survival of structures or hut platforms.

The chapel at Henllan POW camp has already been assessed and listed Grade II*, but there is a high potential of other buildings and structures as well as below ground deposits surviving at the site.

Whilst requisitioned buildings such as the military headquarters at Cilwendeg (PRN 109269) and Cilgwyn (PRN 107901) that have subsequently been inhabited are unlikely to retain archaeological potential, there is parkland and therefore potential for more ephemeral archaeological material such as graffiti and aborglyphs, particularly on parkland trees.

Observation posts have made up half of the records within this report. Though many of the observation posts have gone out of use, some are still in use. There is clearly archaeological potential for many to survive as upstanding remains.

This desk-based assessment provides a base line of information of camps and ranges within the county and something which should be further enhanced through follow-up fieldwork. The archaeological implications of the work suggest a surprisingly large number of sites which were in military use from the Second World War and onwards and there is potential for archaeological remains throughout the county.

**ACKNOWLEDGEMENTS**

The Trust would like to gratefully acknowledge the funding of the project by Cadw. A number of individuals have helped enormously in providing specialist knowledge and information and have been most generous with their research, these include Phil Howells, Tony Jukes, Jon Berry (Cadw), and Roger JC Thomas (English Heritage). Derek Elliott of the Central Register for Aerial Photography for Wales provided many of the aerial photographs in the report. I would like to thank the staff at the Ceredigion Archives and the Royal Commission on Ancient and Historical Monuments of Wales who were enormously helpful in providing records and documentation and Medwyn Parry who gave some helpful insights to the remains at Ynyslas. Finally Tony Coombe a volunteer of the Dyfed Archaeological Trust has been dedicated in assisting in the compilation of the data and records.
### GAZETTEER OF SITES

**Marion Page, Historic Environment Record Manager**

The gazetteer is listed in alpha numeric order. Where it has been possible to identify the extent of a site then a polygon has been drawn around it and the map is included. Where applicable a corresponding wartime or post War Aerial Photograph is also attached to the record.

HER DESCRIPTION -
A Polish Resettlement Camp is identified on the 6" OS map revised in 1948 and published in 1953, located on the site of the former airfield accommodation, PRN 105926. Following the closure of RAF Aberporth airfield (PRN 30594) in May 1946 a Polish Army Resettlement Camp was established within the former airfield accommodation and facilities. An Officers' Reserve Corps and a Railway Battalion were posted to Aberporth. Local residents were recruited to teach English. The Polish servicemen supplied garrison staff for the vacated military installations within Pembrokeshire and Carmarthenshire. They remained until late 1948 when they were transferred to Shobdon in Herefordshire.
The OS 1953 map clearly shows at least 10 huts and a couple of smaller structures in the field to the south of the airfield. When visited in 2013 the site has been returned to agricultural use and the only remaining trace is a concrete roadway at the gate entrance. A Pyper 2013.

PRN - 31428

NAME - NO 70 HENLLAN BRIDGE CAMP

TYPE - Prisoner of War Camp

PERIOD - Modern

EVIDENCE - Building CONDITION - Not Known/ DAMAGED

NGR - SN35704020 COMMUNITY - Llandyfriog

HER DESCRIPTION -
A prisoner of war camp, No 70, listed as a German working camp (Thomas, 2003). A hut survives which was converted by Italian PoWs into a chapel PRN 57791. Modern aerial photography (Next Perspectives 2009) suggests that the layout and a number of huts and tracks survive. A Pyper 2014.

The Henllan Bridge Farm Prisoner of War Camp in Henllan was built between 1940 and 1941 to house prisoners of war, it held Italian prisoners from 1943 - 1946 and later German prisoners from 1946 - 1947. The camp was of a standard design and consisted of around 35 huts to house the prisoners, a theatre, kitchen, hospital, bathing facilities and other huts and areas with various purposes. In May 1943 1200 Italian prisoners of war, mostly captured in Libya and Tunisia, were marched from the local train station through Henllan to the camp, to begin their imprisonment. Many of the prisoners were allowed to work on local farms in Northern Carmarthenshire, Pembrokeshire and Ceredigion where they contributed greatly to the local economy and life. One of the huts within the camp was renovated by the prisoners into a Catholic Church. A 21 year old prisoner called Mario Ferlito was given responsibility for painting the inside of the church. He painted a fresco depicting the Last Supper on the wall behind the altar and also painted frescos on the walls and roof beams. No paint was available so the prisoners
made their own from natural dyes and fish oil from tinned sardines. The altar and other decorations were made using pieces of wood recycled from Red Cross parcels and food tins such as Bully Beef tins to make the candlesticks. The effect was stunning and the church served the prisoners until their departure later in the war. The Church was named "The Church of the Sacred Heart". The Italian prisoners were re-classed as collaborators after the surrender of Italy and around 700 left in mid-1946 to be repatriated to Italy, others however chose to stay in the local area and many even married and settled down in Wales. The Italian prisoners were replaced by German Prisoners until around 1947 when the camps life as a POW camp came to an end. The designer and painter of the church Mario Ferlito made a return journey to the church in 1977, at the bequest of local school children, to see how his work had survived, he has however, since died in Italy. The Prisoner of War camp and the Church of the Sacred Heart has become a place of pilgrimage for many who were held as Prisoners of War, their families and of course for scores of tourists. The camp has been the subject of many TV programmes and has been mentioned in countless others, such as the BBCs "Hidden Wales". It is also the subject of a book "Y Llinyn Arian" by Jon Meirion Jones, published in 2007. The camp is important as it is the only surviving example of a POW decorated church on the British mainland, although another Italian POW Church called the "The Church of the Barriers" may be found on the Orkney Isles in Scotland. For further details including photos and prisoners memories please see: bbc.co.uk Article written by Carmarthenshire Tourism Officer Rhys D. Anthony.

NAME - OBSERVATION POST NO 6 NEW QUAY HEAD

TYPE - Coastguard Station/ OBSERVATION POST

PERIOD - Post-Medieval/ MODERN

EVIDENCE - Building  CONDITION - Restored/ NOT KNOWN

NGR - SN37686000  COMMUNITY - Llanllwchaiarn

HER DESCRIPTION -
Site of Observation Post No 6 was established in 1939. The observation post was established to support work on weapons trials on the Aberporth range (PRN 107896). In correspondence dated August 1951 a 50ft pole was required to be set up '90yards' away as part of a new Missile Tracking System (MTS) which would record an accurate trajectory of the missile, partly this was a safety system - if the missile showed signs of deviating from its expected flight path it could be broken up by an internal explosive charge denoted from the ground, but it also provided a method of recording accurate trajectories in all weathers. The MTS system consisted of a radio oscillator within the missile and two ground receiver stations.

Aerial photographs from 2009 show the structure survives. A Pyper based on documents in Ceredigion Archives.

NAME - FORMER P.O.W. CHAPEL AT HENLLAN CARAVAN PARK

TYPE - Chapel

PERIOD - Post-Medieval

EVIDENCE - Building  CONDITION - Not Known

NGR - SN3566740177  COMMUNITY - Llandyfriog

HER DESCRIPTION -
Built c1940, initially as a dormitory and converted shortly afterwards to a chapel for Italian prisoners of war. Formally dedicated in 1944. The site was a P.O.W. camp, set up c1940. The conversion of the building was carried out by the Italian prisoners, utilising basic materials, such as wood from cases, cement bags, tins and roofing felt. Paint was made by extracting natural dyes. The artist chiefly responsible for the painted schemes was Mario Felito. Reason Listed at II* as an unique and unusually elaborate example of a P.O.W. Chapel in Wales.

Photographs of the Italian Prisoner of War chapel at Henllan: ADX/870/7/3
Towards the end of the Second World War a range was established at Ynyslas for the testing of anti-aircraft missiles. Two rocket launching tracks were built in the sand dunes at the mouth of the Dyfi estuary with associated observation posts and structures. Documents in the National Archives refer to the Experimental Establishment Ynyslas being permanently moved from 17th May 1946 to the Anti-Aircraft Practice Camp at Aberporth (PRN 109288).

Fieldwork by the RCAHMW have established that two BCF (British Concrete Foundation) huts and other structures survive as either buried archaeology or ruinous structures. A Pyper based on RCAHMW descriptions.

NAME - ABERAERON CAMP AND AIRSTRIP
TYPE - Military Camp
PERIOD - Modern
EVIDENCE - Complex CONDITION - Not Known
NGR - SN44476182 COMMUNITY - Llangunnor

HER DESCRIPTION -
A Light Anti-Aircraft School was established on the cliffs southwest of Aberaeron, probably in 1940. It included a camp of temporary buildings, accommodation, schoolrooms, ablutions, stores and a number of circular gun hards facing out to sea. The local farms were evacuated and the house of Clifforch was the Commanding Officers headquarters (PRN 109286). An airstrip was established on the east side of the A487, used for liaison aircraft. It was used by the RAF, Army, Royal Marines and later in the war by the United States Army. Summary description based on Jones, 2007.

A 1942 aerial photograph shows an extensive camp at that time, with at least 120 huts arranged, often in groups of five, across the fields from the coast road across to the headland. It appears that three gun hards were constructed at the cliff top. The 1946 RAF aerial photograph shows the layout of the camp clearly connected by trackways, and the number of gun hards had increased to 12 aligned along the coastal strip.

Aerial photographs dated 2009 suggest that trackways, concrete hardstandings and some structures survive to the western extent of the camp, but other fields where structures once stood have been returned to pasture. A Pyper 2016.

An observation post built to observe and track missiles tested on the Aberporth range (PRN 107896). A small building c 3m square, doorway in the southeast wall. Metal framed, six pane window high set and longitudinal in the northwest wall. Brick built, flat concrete roof with overhang all round. Blue painted four panelled door, broken with one panel missing. A Pyper 2013.

SOURCES - Pyper, A 2013 Twentieth century military sites: Airfields - dispersed sites and defences
1941-71 Research Aircraft Establishment: Aberporth
Observation post PRN 105930 visited in 2013.
Highmead House and associated park was used as a camp by the American Army during the Second World War. Records of United States Army Units from Station Lists record various units based there from November 1943, including 112 Infantry Regiment, 372 Engineer General Service Regiment, 38 Infantry Regiment, until June 1944. Aerial photographs from 1946 show an area to the northeast of the mansion house with a number of huts arranged around a trackway, within the centre of the track are a number (over 50) of square concrete tent bases in three paired rows. To the north are the faded imprints of circular bell tents? Aerial photography from 2009 shows that although no huts appear to survive there are the traces of concrete hut bases. A Pyper based on Phil Grinton Station Lists and aerial photographs. 2016.

TYPE - WEAPONS TESTING SITE

PERIOD - SECOND WORLD WAR

EVIDENCE - DOCUMENTARY EVIDENCE

CONDITION - NOT KNOWN

NGR - SN24425200 COMMUNITY - Aberporth

HER DESCRIPTION -
The headland at Aberporth was purchased by the War Department in 1938/9 for use as a Rocket Firing Range and adjacent land was purchased for an Anti-aircraft Practice Camp (PRN 109288). In 1940 the Projectile Development Establishment moved here from Halstead in Kent due to concerns about its vulnerability to enemy attack. In addition to the range itself observation posts were established at various locations along the coast to track the trajectory of missiles. Drogue targets towed by aircraft flown from both Aberporth and Llanbedr airfields were used in these early years. 1945 saw the introduction of liquid fuelled missiles and one of these early guided missiles successfully shot down a pilotless target aircraft for the first time at Aberporth in 1954.

The decades following the war saw new developments and further research and development take place including the building of, in 1951-4, a dedicated site to develop and evaluate the Sea Slug missile from Naval ships (PRN 107900). The range has seen a constant development and change with new structures and features introduced to keep pace with technological developments. In 2016 MOD Aberporth is described as 550 acres of land and in addition 6500 km2 of airspace and is largely involved with testing air launched missiles and unmanned aerial systems (UAS). Alice Pyper 2016 based on various sources.

HER DESCRIPTION -
An army camp and airstrip is recorded, established in May 1943, for the US army 696th Armoured Field Artillery Battalion. They included a regiment of tanks and Piper Cub L4 aircraft of the Air Observation Posts which apparently used a grass airstrip to the south of the track. This formed part of an enormous battle school for training in mobile warfare. The unit was evacuated just before D-Day on the 6th June 1944. It's likely that all temporary structures were cleared, though shells are sometimes found. Alice Pyper 2016 based on I Jones p 188-90.

NAME - ABERPORTH RANGE SHIP SIMULATOR FIRING PLATFORM

TYPE - WEAPONS TESTING SITE

PERIOD - MODERN

EVIDENCE - DOCUMENTARY EVIDENCE CONDITION - DAMAGED

NGR - SN25085244 COMMUNITY - Aberporth

HER DESCRIPTION -
A facility to test and evaluate the launching of Sea Slug missiles from Royal Navy ships was built between 1951-4 in the cliffs below the headland at Aberporth. The site consisted of a ship-simulation firing platform, which comprised a 20m square and 13 metre deep basin, which when flooded contained the Claussen Rolling Platform, an ovoid metal floating hull, which would simulate the pitch and roll of a ship at sea and thereby test the launch system under marine conditions. This site is the only terrestrial location for testing. Control equipment was housed in adjacent buildings, and the site was accessed by a purpose built incline railway, and other subterranean rooms, buildings and a magazine were constructed at the site. Sea Slug trials ended in 1968 but the site was used to test Sea Wolf and Sea Dart missiles. Most surface buildings were demolished in 2004, but many below ground structures remain. Alice Pyper based on Cadw Scheduling Description and J. Berry 2011.

NAME - OBSERVATION POST DINAS LOCHTYN

TYPE - OBSERVATION POST

PERIOD - MODERN

EVIDENCE - DOCUMENTARY EVIDENCE CONDITION - NOT KNOWN

NGR - SN31535485 COMMUNITY - Llangrannog

HER DESCRIPTION -
The original observation post built in 1939 to track missiles launched from the Projectile Development Establishment at Aberporth was demolished and an new observation post built beside it in the early 1990s. As the site is located within a scheduled ancient monument, an Iron Age Hillfort, Dyfed Archaeological Trust carried out an excavation on the footprint of both sites, both pre-construction of the new building and post demolition. A Pyper based on information from K Murphy.

SOURCES - 1941-71 Research Aircraft Establishment: Aberporth
Towards the end of the Second World War a range was established at Ynyslas for the testing of anti-aircraft missiles, (PRN 94906). The associated camp was established near the requisitioned farmhouse of Moel Ynys (PRN 94920) which served as sergeants' accommodation. Huts were built to the north of the farmstead and a hutted camp was constructed to the east of the crossroads which aerial photographs show consisted of a gridded pattern of 12 huts to the south of the road and a further row of six to the north. Fieldwork by the RCAHMW have established that a two BCF (British Concrete Foundation) huts survive and other structures survive as either buried archaeology or ruinous structures. A Pyper based on RCAHMW descriptions.

NAME - CILFFORCH

TYPE - MILITARY HEADQUARTERS

PERIOD - MODERN

EVIDENCE - DOCUMENTARY EVIDENCE  CONDITION - NOT KNOWN

NGR - SN44606160  COMMUNITY - Aberaeron

HER DESCRIPTION -
The headquarters of the Light Anti-Aircraft School established on the cliffs southwest of Aberaeron, probably in 1940. The local farms were evacuated and the house of Cilfforch was the Commanding Officers headquarters. An airstrip was established on the east side of the A487, used for liaison aircraft. It was used by the RAF, Army, Royal Marines and later in the war by the United States Army. A Pyper 2016.

NAME - ABERPORTH ANTI AIRCRAFT PRACTICE CAMP

TYPE - FIRING RANGE

PERIOD - MODERN

EVIDENCE - DOCUMENTARY EVIDENCE CONDITION - NOT KNOWN

NGR - SN24005232 COMMUNITY - Aberporth

HER DESCRIPTION -
An anti-aircraft practice camp was established on the Aberporth headland adjacent to the Projectile Development Establishment (PRN 107896) it was originally bought in 1939 by the War Department in 1938/9. Plans of the headland in 1949 continue to show the boundary between the A-A practice camp though in reality the anti-aircraft school closed after the war. Aerial photos from 1946 show an extensive complex of buildings and structures on the headland, with a series of gun hards at the cliff top facing out to sea. A Pyper based on documents in Ceredigion Archives (RAE/Ab/1029).
