SUMMARY

Recent years have seen a series of projects to address the lack of understanding and knowledge of sites in Wales which relate to the conflicts of the Twentieth Century. In 2015 the first assessment of Military Camps and Ranges was carried out looking at the county of Carmarthen, this was followed by Ceredigion (Pyper & Shiner 2015, 2016). The focus was camps and ranges established and in use during the Second World War and succeeding years. As Pembrokeshire has the largest number of sites, it was decided to split the county and cover sites within the Preseli district during the year 2016-17, to be followed by South Pembrokeshire in 2017-18.

This is the first phase of work, a desk-based assessment, gathering documentary sources including primary and secondary sources to establish the number, type, location and extent of sites. A range of site types have been considered and include; military ranges, army camps (British and American), hospitals, prisoner of war and resettlement camps, depots and land army camps.

Pembrokeshire has benefitted from the survey and report carried out by Roger J C Thomas in 1993-4 in his Survey of 19th and 20th Century Military Buildings of Pembrokeshire, a key source used in this assessment. As part of Thomas’s assessment some sites have already been incorporated into the HER, however many have not. This assessment has been able to ensure that more of sites from his report have been included in the HER as well as some new sites. This report does not include the dispersed accommodation camps which have already been identified and recorded in the assessment of Military Airfields (Pyper 2012, 2013 & 2014).

Forty-three sites were recorded in the HER at the outset of the exercise, these have now been updated and a further thirty-three new sites have been added to the record. Where possible aerial photographs have been used to establish the extent of the camps or ranges and these have been mapped onto MapInfo GIS. The information from this assessment will contribute to our understanding of the impact of the 20th century conflicts through its archaeology and surviving structures. It will provide a basis for follow-up fieldwork to assess national or regional significance of surviving archaeological remains and also provide information for heritage management and development control purposes.
INTRODUCTION

This study of Camps and Ranges forms part of a phased programme of work being undertaken by the Welsh Archaeological Trusts, addressing the lack of information on the archaeology and historic environment which stems from the conflicts of the twentieth century. Cadw have granted-aided the investigation of various classes of site across Wales, and within Dyfed, Military Airfields and their dispersed sites, crashed Military Aircraft sites, scoping exercises to investigate the archaeology of the First World War, and now desk-based assessments on Camps and Ranges within Carmarthenshire and Ceredigion counties, have so far been addressed, (Cadw 2009, 4, Pyper 2012, 2013a & b, 2014a & b, Pyper 2015). This report constitutes the first part of the assessment looking at the Preseli district of Pembrokeshire. This suite of assessments also builds on the work carried out through the Defence of Britain programme, co-ordinated by the Council for British Archaeology and now archived with the Archaeology Data Service and the Royal Commission on Ancient and Historical Monuments for Wales.

The project addresses several of the themes and sub-themes identified in the research agenda of Modern Military Matters (Schofield 2004, p14), where it is acknowledged that camps are one of the least studied categories of site, and in addition the difficulty of establishing overall figures for the numbers of camps constructed. This assessment takes into consideration any military established base or range and includes the army, air force and naval camps and ranges which vary in scale. Thus, the scale of sites in this class are vast including; military camps, ranges including training facilities for small arms or weapons testing and any associated structures, smaller camps associated with searchlight or anti-aircraft batteries, hospitals, prisoner of war camps, internment camps, resettlement camps, temporary camps for American troops prior to D-Day and also those for Conscientious Objectors, Women’s Land Army, etc. It does not include the dispersed accommodation camps associated with the airfields and sites of military aviation that have been covered in the previous assessments, Pyper 2012, 2013 and 2014. This report constitutes the first stage, a desk-based assessment, to be followed by site visits to record surviving remains.

These studies do not address camps established prior to, or during the First World War associated with the Yeomanry and Territorial Forces, as these will be assessed through the on-going First World War project. This report concentrates on the massive military expansion and mobilisation which took place immediately preceding and during the Second World War, those camps and ranges which continued in use in post war years and also sites in continued military use. Many of these sites were temporary and rapidly constructed, and many with only a basic infrastructure provided. In other cases existing buildings, often large houses, were requisitioned to serve as headquarters with personnel billeted in the house and other temporary structures erected within the grounds.
Twentieth Century Military Sites: Second World War and later Camps and Ranges

Some sites continued in use beyond the end of hostilities, and some prisoner of war camps were not decommissioned until the late 1940s (Hellen 1999, 191). Occasionally some sites continued in use through the Cold War and continue in use to this day. The report addresses sites that are, or have been owned, leased or licensed by the military, and not areas of private land which have been used for military training (TOPL; Training Over Private Land), though the use of this land for military use will clearly have had an archaeological impact.

The information collated in this report will contribute to our understanding of the impact of the 20th century conflicts through its archaeology and surviving structures, provide a basis for follow-up fieldwork, and provide information and advice for heritage management purposes and for development control and forward planning in Local Planning Authorities.

PROJECTS AIMS AND OBJECTIVES

The projects aims and objectives are set out in the Dyfed Archaeological Trust Cadw Grant-Aided Programme Project Proposals 2016-17;

The overall aims of the project are:

- an application of definition, classification, quantification and distribution of these sites in the Preseli district of North Pembrokeshire,
- an assessment of the archaeological significance of these sites in both a regional and national perspective,
- an assessment of the vulnerability of this element of the archaeological resource,
- recommendations for scheduling and listing

These aims will be fulfilled following the fieldwork assessment in part two of the project.

The desk-based assessment’s objectives are:

- To access and assess available primary and secondary sources for each of the camps and ranges within Preseli district of north Pembrokeshire,
- To incorporate this information into the Dyfed Archaeological Trust’s Historic Environment Record (HER), creating new sites or enhancing existing ones,
- To create GIS polygons to be supplied for heritage management advice.

METHODOLOGY

The way in which this project has been approached mirrors that of previous threat related projects undertaken by the Welsh Archaeological Trusts with grant-aid from Cadw. Maps, plans and aerial photographs were consulted for each site. Records were created and new point and polygon-based
GIS data compiled as a result of the research. This information is now integrated into the regional Historic Environment Record and is available through the HER and through the Archwilio website.

The following methodology was adopted to achieve the project’s objectives:

- An assessment of existing records within the HER,
- An assessment of existing records within the NMR / Coflein,
- An assessment of the records held in the Defence of Britain archive,
- A rapid overview of sources during a visit to the National Archives,
- An assessment of records held at the local records office, in this case Pembrokeshire Archives,
- An assessment of records and aerial photographs at the National Monument Record,
- An assessment of the digital records held at Fold3.com, a web-based collection of original US military records, including many from the U.S. National Archives,
- Assessment of data listed in secondary sources, on the internet or hard copy local histories and memoirs,
- Assessment of wartime and later aerial photographs,
- Creation of new records and enhancement of existing records in the HER,
- Production of a short report including a gazetteer of sites.

The National Archives and Pembrokeshire Archives Service were visited to consult primary sources and also the Royal Commission on Ancient and Historical Monuments of Wales, principally to review RAF aerial photographs.

A number of key sources were the basis for the assessment, of foremost importance is the survey work carried out by Roger JC Thomas in 1993 and its associated database and MapInfo GIS tables. The report by John Schofield (2006) England’s Army Camps provided no additional sites for this report. Roger J C Thomas (2003) Prisoner of War Camps (1939-1948) provided one new site based on desk-based research at The National Archives.

Increasingly on-line sources are available with many groups or individuals publishing on the internet or transcribing historic documents on websites or webpages. In Pembrokeshire, a website established by PLANED (Pembrokeshire Local Action Network for Enterprise and Development) called ‘Experience Pembrokeshire’ have worked with Roger Thomas to provide information on the extensive military heritage in the county, on occasion there is further information on sites recorded in his 1993 report. Any references to this or other websites are sourced in the individual site records with their corresponding Uniform Resource Locator (URL) to access the appropriate page on the internet.
All sources consulted are referenced in the individual site records.

SITE DEFINITIONS

The following site definitions were identified in the earlier Carmarthenshire and Ceredigion studies but a couple of additional site types have been added following the work in Preseli district.

The primary focus for this assessment has been military installations where armed forces have been established for a permanent or temporary base. Site types and their definitions are derived from the Thesaurus of Monument Types for Wales, which is based on the Defence of Britain thesaurus definitions. The key site types identified in this study have been:

- **Military Camp**: a site where a body of troops is temporarily or permanently lodged, with or without entrenchments and fortifications.
- **Firing Range**: A piece of ground over which small arms or large artillery may be fired at targets.
- **Bombing Range**: An area of land, with associated buildings and targets, used for practicing the dropping of bombs and other aspects of air warfare.
- **Military Base**: A building or group of buildings, often surrounded by a system of fortifications, used as a residential and training site by members of an armed force.
- **Military Installation**: Buildings, structures and sites created for military purposes.
- **Military Depot**: A building or group of buildings, often enclosed by a system of fortifications, used by an armed force for the storage and distribution of military equipment.
- **Military Hospital**: a hospital for the medical and surgical treatment of military personnel and/or their families.
- **Prisoner of War Camp**: a prison site for the containment of servicemen captured in war.
- **Depot**: a place of deposit for the storing of goods. May include a complex of structures.
- **Barracks**: a building used to accommodate large numbers of individuals, often on a temporary basis, in the armed forces or at industrial sites.
- **Military Headquarters**: a building used as a command centre for a military operation.
- **Resettlement Camp**: A camp for the temporary accommodation of uprooted civilians or foreign ex-service personnel, who had fought for the British forces during WWII (e.g. Polish).
- **Weapons Testing Site**: Buildings, sites and structures associated with the demonstration and testing of weapons and military equipment.
- **Rocket Test Facility**: An area for the testing of rockets and guided missiles. Includes all structures associated with both the firing and testing of rockets and missiles.
Twentieth Century Military Sites: Second World War and later Camps and Ranges

- Observation Post: A building or site for watching specific military activities or the movement of enemy forces, etc.
- Women’s Land Army Hostel: A building used to provide accommodation for women working on the land during the First or Second World Wars, also including Women’s Timber Corps.
- Women’s Land Army Camp: A temporary settlement of tents or huts established to accommodate women working on the land during the First or Second World Wars, also including Women’s Timber Corps.
- Auxiliary Unit Operational Base: A well concealed structure, usually constructed underground, intended for use by members of the British Resistance Organization in the event of invasion.

Sites could include existing buildings which were requisitioned, or the construction of new temporary or permanent buildings, or canvas tents, which were erected for the duration of hostilities.

The guiding principal in recording sites has been those areas where military training or installations may have left an archaeological footprint and the location can be reasonably accurately identified.

Many of the sites identified have a complex history and it has not been possible to be absolutely sure of different phases of activity during the scope of this project. Further desk based research in the local archives or the National Archives may reveal their narrative histories.

Some documentary sources – for instance War Diaries or United States Army station lists - often associate military units by town or village but do not provide location information. Wartime documents record Cassini Grid references though not usually to a greater accuracy than a four figure reference, where possible these have been converted to identify with reasonable accuracy their location.
RESULTS

Prior to the assessment being carried out 43 records for camps, ranges and military installations were recorded within the HER:-

*Table 3: Table of site types represented*
Military Camps

Eighteen Military Camps have been identified within the Preseli District. The term camps encompasses a variety of complexes, including those camps associated with the British armed forces establishment of defences such as coastal and searchlight batteries (PRN 34781, 34762, 28402), anti-aircraft batteries and radar stations PRNs 28662, 28619. Many camps have been plotted from aerial photographs by Roger Thomas showing huts or hut bases, though their narrative histories remain undocumented (PRNs 109325, 109326, 109327). A substantial number of new sites have been created which relate to the United States army training which took place in the Preseli hills during 1944; these were usually tented camps or the requisitioning of existing buildings (PRNs 109328, 110398, 110399, 110400, 110401, 110403, 28760).

Ranges; Bombing and Firing

The 1945 map and list of firing ranges (AIR 10/4182, Figure 2) indicates an air to ground US ‘live bombing’ range on Grassholm Island (PRN 109335). The further ranges shown on the map lie mostly within the area of southern Pembrokeshire and will be addressed in the forthcoming assessment.

Further firing or bombing ranges are indicated by the presence of five observation posts or quadrant towers. These are associated with air to sea bombing ranges off the Pembrokeshire coast and have previously been recorded by Roger Thomas (PRNs 28645, 28746, 32160, 32830, 109332). Further investigation is required to identify the scope of these ranges and how they were used.

Two other bombing ranges are known of; one is associated with the seaplane base RNAS Lawrenny which lay in the river Cleddau on the mud flats, the other is the use of the Maenclochog railway line and tunnel (PRNs 110404, 110405) for air to ground bombing practice. The tunnel itself was used to test the ‘Highball’ bouncing bomb developed by Barnes Wallace who had also developed the bouncing bomb used in the Dambuster raids.

No new records for rifle ranges have been created, though two rifle ranges were identified as part of the assessment of Military Airfields (RAF Dale, PRN 28606 and Brawdy PRN 110412).

Prisoner of War Camps

Only one Prisoner of War camp is listed in RJC Thomas’s report (2003), this is the camp in Haverfordwest consisting of 32 huts; however a further, smaller camp at Letterston (PRN 24350) was recorded in the 1994 survey. In addition the two Women’s Land Army camps at Eglwyswrw (PRN 28700) and Mathry (PRN 28749) latterly became PoW camps.
Military Headquarters

Naval Headquarters were established at Milford Haven in the First World War at 1 and 2 Murray Crescent and this continued as HMS Skirmisher in the Second World War (PRN 109318). In addition a now demolished headquarters stood on the site of the Torch Theatre in Milford Haven (PRN 109329).

The headquarters for the Pembrokeshire 3rd Battalion Home Guard has been identified at Picton Place in Haverfordwest (PRN 110403) and the 2nd Battalion Home Guard was based at Haverfordwest Drill Hall (PRN 107821).

Another military headquarters has been recorded at Trewarren house which was the headquarters of a Light Anti-Aircraft battery.

The locations of more military headquarters need to be identified, for instance the Cawdor Barracks (PRN 110412) contains the headquarters of the 14th Signals Regiment, but the location is not yet identified.

Military Base

Military bases include the United States Advance Amphibious Training Base at Milford Haven (PRN35085), and the post war Cawdor Barracks which has been home to the 14th Signals Regiment and centre for electronic warfare since 1995, though now in line for closure (PRN 110412).

Observation Post

A number of observation posts have been identified in connection with the bombing ranges off the west Pembrokeshire coast and in the River Cleddau (PRNs 28645, 28746, 32160, 32830, and 109332).

Military Hospital

The Hakin Camp (PRN 109320) was a large hospital which encompassed Hubberston Fort and included 65 Nissen huts constructed in anticipation of war casualties. It was in use during the summer of 1944 and was closed in August after four months existence.

Depots and Stores

There are a range of depots identified and include the two very extensive Royal Naval Armament Depots at Milford Haven and Trecwn (PRN 28801). Both are complex facilities built to supply and store mines, and make use of underground storage tunnels. Smaller depots include Scoveston Fort which was used as a munitions depot (PRN 5804). A large RAF fuel store at Haven’s Head has
been recorded as part of the assessment of military airfields (PRN102497). Other depots at Johnston (PRN 109333) have an unknown function.

**Women’s Land Army**

There are four hostels which have been identified as part of this assessment, at Fishguard, Havens, Eglwyswrw, and Mathry (PRNs 28758, 109321, 28700 and 28749). The hostels at Eglwyswrw and Mathry were later used to house Prisoners of War.

**Coastal and Searchlight Batteries**

A number of records relate to coastal defences and include the massive gun emplacements and searchlight batteries which occupied coastal promontories to defend the Haven. These sites have been included within this report as very often groups of huts have been identified which provided accommodation to the personnel manning the defences.

**Married Quarters**

A number of more permanent military residences have also been included in this assessment and include the quarters built to accommodate military personnel, often in the post war period. Those identified include married quarters for HMS Harrier (PRNs 28613, and 28614) and those associated with the RNAD Milford Haven depot (PRNs 26119, 26120, 26121).

**Military Training**

The Preseli’s can claim to have supported one of the more intriguing and unique military training exercises during the Second World War. In April 1944 the 740th and 739th Tank Battalions arrived in the Preseli’s from the USA. They established tented camps in Puncheston (PRN 109328, 110401), Mynachlog-ddu (PRN 109337, 110398, 110399, 110400, 110402) and Maenclochog (PRN 28760, 28764, 109338). The 740th and the 739th Tank Battalions came to Pembrokeshire to continue experimental training with ‘Canal Defence Lights’. These were specially adapted tanks, referred to as ‘Gizmos’, fitted with bright strobe lights to dazzle the enemy and conceal an assault on heavily defended positions. The tank battalions were camped around the Preseli’s and used the terrain as a training ground before moving to continental Europe following the Normandy invasion.
DISCUSSION

Sources

A range of sources have been drawn on to assess the range of sites in the county. Primary sources include those seen at both the National Archives and local Pembrokeshire archives. The Map and List appended to the List of Firing Ranges in 1945 (Figure 2) is helpful identifying the bombing range on Grassholm though it will play a more important role in the assessment of south Pembrokeshire. Confusingly a range is marked on the map which extends seawards from Roch in the northeastern part of St Brides Bay; however there is no corresponding list entry in the appendices and the origin of this site remains a mystery. It is hoped that this can be further interrogated at the National Archives on future visits.

A key source in the Pembrokeshire Archives were files which related to the requisitioning of land for military use (HDX/262/105 and PCC/PL/2/32), these helped to identify land parcels which related to the encampments established for the use of the United States tank battalions in 1944.

Aerial photographs have been an essential source of information for establishing the location and extent of sites; the Medmenham wartime collection have been helpful, as the collection does feature runs which include Milford Haven, however the areas north of the Haven are very patchily covered. The RAF post war sorties have also been a key source and were heavily drawn on by Roger Thomas in his key report of military buildings (1993). This report and the associated database have been an instrumental in identifying many sites. Where possible the aerial photos referenced in his report have been re-examined in order to create polygons to define the extent of sites. The PLANED volumes on the Military Heritage of Pembrokeshire have also been useful has a secondary source and help to provide further histories and descriptions of the sites. However, the narrative histories of many of the sites still require expansion and where possible these will be teased out when further work is carried out.

As with the former reports on Carmarthenshire and Pembrokeshire, the US army use of the region has been evidenced in the station lists which have been transcribed and digitised by Lt Col Philip C. Grinton; US Army (Retired) who documented the locations of various units month by month from September 1943 to December 1944. Research carried out by Adrian James, Phil Howells and Andrea Sutcliffe have been instrumental in providing further supporting information on this intriguing and secretive episode when experimental technologies were being tested in the Preseli’s.
Table 4 below summarises the likelihood and potential significance for archaeological remains at each of the sites identified. Three categories of potential have been shown, those for 'Upstanding Remains' which includes either buildings, huts or other built structures, 'Below Ground' remains which includes hut platforms, ground works and services, earthwork banks and monuments etc. The third category is 'Associated Ephemeral Remains' which might include artefacts or unstratified remains, and graffiti or aborglyphs (graffiti carved into the bark of trees) the latter of which are becoming more widely recognised and particularly common in military contexts associated with parkland.

For each of these categories the archaeological potential of sites was assessed using the following terms; confirmed, high potential, probable, possible, unlikely, or none, based on the current level of information available.

Table 4: Table showing archaeological potential
The table summarises each site on the basis of archaeological potential and offers priorities for the second phase of work carrying out fieldwork.

**CONCLUSION**

The study has been successful in carrying out an extensive survey of camps and ranges in the Preseli district of north Pembrokeshire, which has resulted in updating and enhancing the 43 existing HER records and adding a further 33 new records. In many cases, where information is available, the geographical extent of a site has been identified, mapped and included in the HER to inform future heritage management advice.

The archaeological resource which has been identified as part of this study is wide ranging in scope from the large complex and extensive sites such as the massive armament depots at Trecwn and Milford Haven (PRNs 109334 and 28801) to isolated features such as observation posts which form the remaining archaeological fragment of a bombing range (PRN 109332). By its nature the broad scope of such an assessment has prioritised identifying and recording sites for inclusion in the HER, which has meant that it has not usually been possible to drill down into each sites’ own narrative history.

The methodology employed in this report has followed that used in the previous assessments for Carmarthenshire and Ceredigion (Pyper 2015 & 2016). It is based on a rapid assessment of documentary sources available from the National Archives and local records offices. The review of material at the National Archives was rapid and rather broad brush, and only obvious sources identified through the on-line Discovery catalogue were explored. It is likely that a more thorough investigation would provide further documentary material to inform our understanding of wartime activity in the southwest of Wales.

The results north Pembrokeshire have differed from those in the previous assessments undertaken and have demonstrated that the archaeological resource in the Preseli region was of a substantially different nature to that recorded in Ceredigion and Carmarthenshire. The high number of military camps (18) is perhaps not so surprising, though uniquely a number of these were based to undertake research and development when the Preseli’s were used by American tank units for the testing of ‘Gizmo’ tanks. The high number coastal defences, including searchlight batteries, is not so startling given the geographic position of the region which encompasses the western approaches and the northern coastline of the Milford Haven waterway.

Less typical sites include RNAD Trecwn and RNAD Milford Haven (PRNs 109334 and 28801) - two of only three Royal Naval Armament Depots in Wales, the third being the Royal Naval Propellant Factory at Caerwent. The Naval Depots are so located as to be close to the dockyards on the Haven and accessed by rail for distribution.

Other unusual sites which have been included in the assessment are the Radar Stations at RAF Haycastle Cross and St David’s Head (PRN 28660 & 109339) which form part of a coastal ‘chain’ of radar sites around the UK.
A number of Women’s Land Army Hostels have been identified, largely through secondary sources. The primary documentary evidence supporting these sites is currently unidentified, and rectifying this situation may lead to discoveries of further camps. Similarly only one Prisoner of War camp has been identified from RJC Thomas’s report, though it’s understood that two of the Women’s Land Army camps were also used as PoW camps later in the war. It would be beneficial to try and establish presence or absence of PoW camps and if indeed this is an accurate reflection of the situation in the war.

This desk-based assessment provides a base line of information of camps and ranges within the county and something which should be further enhanced through follow-up fieldwork. The archaeological implications of the work suggest a surprisingly large number of sites which were in military use from the Second World War and onwards and the considerable potential for archaeological remains throughout the county.

**ACKNOWLEDGEMENTS**

The Trust would like to gratefully acknowledge the funding of the project by Cadw. A number of individuals have helped enormously in providing specialist knowledge and information and have been most generous with their research, these include Phil Howells, Adrian James, Andrea Sutcliffe, Jon Berry (Cadw), and Roger JC Thomas (English Heritage). Derek Elliott of the Central Register for Aerial Photography for Wales provided many of the aerial photographs in the report.
would like to thank the staff at the Pembrokeshire Archives and the Royal Commission on Ancient and Historical Monuments of Wales who were enormously helpful.
GAZETTEER OF SITES

Marion Shiner, Historic Environment Record Manager

The gazetteer is listed in alpha numeric order. Where it has been possible to identify the extent of a site then a polygon has been drawn around it and the map is included. Where applicable a corresponding wartime or post War Aerial Photograph is also attached to the record.

PRN - 5804

NAME - FORT SCOVESTON TYPE – Military Depot; Fort PERIOD - Post-Medieval/Modern

EVIDENCE - Building CONDITION - Not Known

NGR - SM94420662 COMMUNITY - Llanstadwell

HER DESCRIPTION -

Hexagonal fortification built c1850 occupying some 75 acres, with sides of 130yds (117m), escarp 22ft (6.60m), dry moat 36ft 6in (10.95m) wide. Moat flanked by 1 caponier and 4 demi-caponiers. Bombproof casemates for 128 officers and men, and a main magazine. R.J Thomas 1993 Scoveston Fort is depicted on the annotated 1916 map of Pembrokeshire Field defences with a hut camp to the east of the fort and manned by I Battalion. This map depicts a series of works including blockhouses, barbed wire entanglements, defended positions and locations of infantry camps, which were constructed or proposed for construction to defend Milford Haven and in particular the dockyard at Pembroke Dock from landward and seaborne invasion during the First World War. A. Pyper 2015.

During the Second World War the fort was also reused by the military. Documents in the Pembrokeshire Archives record the acquisition of land by the Admiralty in March 1944 in order to erect Elephant huts to store ammunition in advance of D-Day. A Pyper 2017

**HER DESCRIPTION** -
The Royal Naval Armaments Depot was established in 1934 by the Admiralty. This workshop is rectangular, seven bayed, single storey building, consisting of a corrugated asbestos clad, pitched gable roof on steel trusses. It was built in 1939 as a motor transport workshop and garage. There is a brick west wall but the north and south gable ends are of corrugated asbestos. The east wall is occupied by six steel roller garage doors and the southernmost bay has a brick wall. It is now disused. RJC Thomas 1993

NAME - RAF HAYSCASTLE;AMES 68 TYPE - Radar Station PERIOD - Modern

EVIDENCE - Building CONDITION - Damaged

NGR - SM91672545 COMMUNITY - Hayscastle

HER DESCRIPTION -
RAF Hayscastle was one of three pioneering Chain Home Stations (Radar) erected in Pembrokeshire in 1940. These stations provided early warning response to air attacks and their purpose was to detect enemy aircraft transiting anywhere in an arc from Land's End, the South Irish Sea and towards Liverpool. It consisted of two wooden receiving towers 325 ft. high with a "curtain array" hanging between them. There were four steel transmitting towers a 240 ft. high, a searchlight, plotting rooms, generator and other buildings were dispersed in order to reduce damage from an enemy attack. It became non-operational in 1945 and closed in 1957.

NAME - GOETTY MOUNTAIN ROSEBUSH TYPE - Military Camp PERIOD - Modern

EVIDENCE - Structure CONDITION - Destroyed

NGR - SN06852925 COMMUNITY - Maenclochog

HER DESCRIPTION -
Rosebush had been used as a summer army camp by the British Army since the First World War. In 1944 it was used by the 740th and the 739th Tank Battalions who came to Pembrokeshire to continue experimental training with 'Canal Defence Lights'. These were specially adapted tanks with bright lights to dazzle and conceal an assault on heavily defended positions. The tank battalions were camped on Budloy Mountain, and used Rosebush Quarry as a motor park where the old engine sheds were refurbished as workshops. Documents in the Pembrokeshire Archives record the requisition of land for a temporary camp site, no permanent buildings were erected. A Pyper 2017

HER DESCRIPTION -
See PRN 5015, included in the scheduled area of 5015. GW. 1996. Description as follows:

The site occupies a knoll on a promontory approached by a narrow rock. The knoll forms the highest ground of the promontory, immediately facing the rock, but with a hollow running east-west across the promontory first inside the area of the fort. The elements consist of perimeter defences and entrance; a battery on the north-east, a magazine on the west. On the north and north-west the defences consist of a rock-cut ditch with a vertical inner face, partly rock cut and partly formed by a wall, but the latter not projecting above ground level to allow a full field of fire for the guns on the battery. It is defended by natural cliffs on the east. It is defended by a wall on the south and south-east, the latter closing the end of the hollow which runs across the promontory. At the south-west corner, near the approach across the peninsula, it has been robbed away. There is a gate in the south-east of the southern wall, approached by a park across the neck of the promontory. It is plain apart from slight projections flanking the door internally and externally. The battery partly incorporates a natural rock outcrop. It consists of a sub-rectangular terraplain facing seaward, revetted on the north, west and west of the southern side. There are drains at the front. There is a separate rectangular platform with a paved alcove on it at the west. At the centre is the paved foundation for a gun emplacement. On it are three stone platforms with concrete tops supporting cannons - these were in the process of renovation/rebuilding when visited. The magazine is located downslope from the battery within the hollow. It is a two roomed vaulted stone building with slit windows with brick surrounds. To the rear of the west wall of the fort, again downslope from the battery and within the hollow, is a narrow structure represented by the bases of the north and east walls, the former with remains of a fireplace, whose west wall is that of the fort. This wall should therefore bear traces of structure, roof lines etc., but with the exception of a very small window there is no indication of this. But this wall has possibly been rebuilt /re-pointed at various dates, it may be the quarters of the garrison. To the south of the fort and west of the approach across the neck is a platform cut into the slope with a concrete base - PRN 32156. According to annotations by R Thomas on the photographs of the fort this is a hut floor rumoured to be associated with a searchlight battery, (according to his summary report it is a Coast Artillery Battery and is excluded from the survey). The site has been
considered and refuted as that of an Iron Age fort (Crane 1994). One remaining hollow across the peninsula may represent the ditch and the battery area incorporates the bank of such a fort, which has been re-used to form the 18th century fort, originally enclosing the whole promontory. But these primitive defences do not occupy the rock which is the natural line of defences, which would have been used in Iron Age defences and are probably natural. (An Iron Age ditch would conceivably have lain on the site of the World War II hut 32156 and been cut away by this, but there is no evidence or of the construction of such a ditch to the east of the hut Pace, CADW who claim a possible ditch associated with the 18th century fort in this area). Nevertheless, this primitive Iron Age site has been given PRN 32157. Small scale rebuilding and reconstruction has been carried out in the past. Much of the fort has now been well restored and re-pointed but this renovation programme is ongoing. (However, correspondence in the SAM file deals with more limited work than has been carried out - concentrating on the cannons). The fort has apparently not been included in R. Thomas' survey apart from a private photographic survey. A thorough survey is necessary. GW. 1996.

NAME - FISHGUARD BATTERY TYPE - Coastal Battery PERIOD - Modern

EVIDENCE - Building CONDITION - Restored

NGR - SM983384 COMMUNITY - Dinas Cross

HER DESCRIPTION -
A Coastal Battery, guns installed in 1940 and then went into Care and Maintenance in 1945. The site is incorporated in the Fishguard Bay caravan park on ground sloping to the north of cliffs. The site as a whole and individual components are described by R. Thomas. Further comments can be made on the major structures. Only the major structures and some minor structures were visited. The major elements consist of two gun houses on the edge of the cliff (RT 259 02 & 03). Inland of these is an observation post (25901) and minor structures (an engine room, three U/P holdfasts, a store, a Nissan hut, ten earth huts). Further to landward was a minefield. Structures continue down the cliff below the gun houses included searchlight emplacements and a further battery observation post (08). These appear to have been built over a cliff quarry, with much spoil, which was partly cut back for the emplacements. One of the searchlight emplacements and adjacent generator hut has collapsed into the sea and the surviving searchlight emplacement and generator hut is being encroached on by the collapsing spoil.

HER DESCRIPTION -
On ground sloping to the northeast toward cliffs. Thomas describes a quadrant tower and concrete range direction arrow at the PRN cited, located off AP's and not visited. Nothing is visible at the location quoted. A short distance to the north is a feature, which may be the truncated base of the tower converted into a farm building. This was assumed to be a farm building at the time of the field visit and was not closely viewed or plotted. GW. 1996.

HER DESCRIPTION -
Coastal artillery battery identified by Roger Thomas RT104 together with the associated military camp PRN 34643. The battery comprises various structures, including four gun
emplacements in a row set behind low earth banks and complex ammunition stores behind each with access to the camp 34762, and several lookout posts? and two quarries, all situated on the coastal slopes of Watch House Point promontory. The quarried stone was crushed and used to cap the concrete structures and the ammunition stores creating artificial scree slopes. These structures are all in good condition although the underground stores are blocked off and one of the lookout posts has collapsed. BA & KM 1997

NAME - U.S NAVAL ADVANCED AMPHIBIOUS BASE MILFORD HAVEN TYPE - Military Base PERIOD - Modern

EVIDENCE - Complex CONDITION - Various

NGR - SM91270539 COMMUNITY - Milford

HER DESCRIPTION -
An Advanced Amphibious Training Base was commissioned at Milford Haven on 13 January 1944. Accommodation for personnel and a dispensary were set up. The US Navy property included the fort which was remodelled to house the administration, operations and communications offices. 66 Nissen huts remained from previous British use of the site, and the 81st Construction Battalion added 69 standard concrete huts, 2 Nissen huts, 1 Romney hut to provide housing additional office space and galley area, hospital and recreation facilities. Two other areas were under American jurisdiction including Hakin Dock and Wards' Pier for the craft to operate from. 2 Nissen huts 2 Romney huts for recreation and 2 Nissen huts for stores and one standard concrete huts for dispensary were built on the land adjacent to the pier. The site purpose was training personnel whilst afloat and ashore. A Pyper 2017 based on Dept. of the Navy Office of Naval History Washington 25 DC.
HAVEN'S HEAD RAF FUEL RESERVE DEPOT

NAME - HAVEN'S HEAD RAF FUEL RESERVE DEPOT  
TYPE - Fuel Store  
PERIOD - Modern  
EVIDENCE - Complex  
CONDITION - Not Known  
NGR - SM89860650  
COMMUNITY - Milford  

DESCRIPTION -  
A compound of 5 underground circular fuel storage tanks. Part of a network of storage tanks and pumping station which supplied high octane fuel to the military airfields of Pembrokeshire. Built in 1936 it continued in use supplying RAF Brawdy until the 1970s. When visited in 2012 the compound was not accessible though the high wall surrounding it appears intact. A Pyper 2012.

Cwm Brandy Camp was first established under canvas for the Royal Marines in circa 1940. It consisted of 58 huts with hardstanding, and tracks (HER RT 217). At 22.30 on 23rd September, 1941, a landmine was dropped on the camp, killing 3 and injuring 13 (Perret 1992). The camp is also thought to have housed American troops and accommodation for a searchlight battery (pers. comm). Following the war, the camp was used for civilian accommodation. The camp huts were demolished in the 1960-70s (pers.
comm) when the houses were built along the eastern edge of the present development area. A cache of unexploded hand grenades was unearthed during the construction of these houses. Today most obvious traces of the camp have gone, although the main track and buildings can be discerned in places, and the drainage system still survives below ground.

US army 23 Infantry Regiment, 3 Battalion Companies I & K were stationed at Fishguard in April and May 1944.

One of a number of fields in which a temporary military camp and storage area was established during 1944 when the US army were training in the Preseli’s. Documents in the Pembrokeshire Archives record the requisition of land for a temporary camp site, no permanent buildings were erected. A Pyper based on A James, 1998, RJC Thomas 1993.
A camp was established for the 701st and 738th Medium Tank Battalions (Special) who arrived from the United States via Liverpool and Clynderwen station in May 1944. They had come to train with the experimental 'Canal Defence Lights'. These were specially adapted tanks with bright lights to dazzle and conceal an assault on heavily defended positions. Training took place on Mynydd Cilciffeth and the camp included pyramidal tents pitched in the fields and a water pumping station was built on Puncheston Common. Aerial photographs 1946 show a trapezium shaped field with crop-mark evidence of eight hut bases around the headlands. Adjacent fields to west show evidence of military activity, i.e. multiple gateways cut through hedges, trackways & some feint cropmarks. Plotted off aerial photographs. Recorded by RJC Thomas as site no 487/000. A Pyper based on A James, 1998 and RJC Thomas 1993.

NAME - TYRCH QUARRY  TYPE - MILITARY TRAINING SITE  PERIOD - MODERN

EVIDENCE - DOCUMENTARY EVIDENCE  CONDITION - NOT KNOWN

NGR - SN15662964  COMMUNITY - Mynachlog Ddu

HER DESCRIPTION -
Tyrch Quarry and the surrounding fields provided a temporary camp during the Second World War (1944) for United States Army tank units who came to Pembrokeshire to continue experimental training with 'Canal Defence Lights'. These were specially adapted tanks with bright lights to dazzle and conceal an assault on heavily defended positions. A Pyper based on A James 1998.

The quarry itself was used by the battalions (736th and 748th Medium Tank (Special) battalions) as a motor pool and tank park. The units camped on the hillside of Foel Dyrch. It is believed that the Headquarters were established in Trefach Manor. Training took place on the open common to the north of the village and on open ground to the southwest of Crymych. US Station Lists identify the following units during April 1944: 9 Armoured Group, Headquarters 538 Ordnance Heavy Maintenance Company 736 Tank Battalion (Self-Propelled), Headquarters, HQ Company, Companies A,B,C, Medical Detachment, Service Company. 748 Tank Battalion (Self-Propelled) Headquarters, HQ Company, Companies A,B,C, Medical Detachment, Service Company. A Pyper based on A James 1998.

NAME - ROSEBUSH QUARRY  TYPE - MILITARY TRANSPORT SITE  PERIOD - MODERN

EVIDENCE - DOCUMENTARY EVIDENCE  CONDITION - NOT KNOWN

NGR - SN07783011  COMMUNITY - Maenclochog

HER DESCRIPTION -
In 1944 American Army tank battalions occupied the old Rosebush Quarry as a motor park and the engine sheds were used as workshops. The United States Army tank units came to Pembrokeshire to continue experimental training with 'Canal Defence Lights'. These were specially adapted tanks with bright lights to dazzle and conceal an assault on heavily defended positions. Documents in the Pembrokeshire Archives record the requisition of land for a temporary camp site, no permanent buildings were erected. A Pyper based on A James, 1998 , RJC Thomas 1993. A Pyper based on A James 1998.

NAME - MAENCLOCHOG TUNNEL TYPE - RAILWAY TUNNEL/ BOMBING RANGE PERIOD - POST MEDIEVAL/ MODERN

EVIDENCE - DOCUMENTARY EVIDENCE CONDITION - NOT KNOWN

NGR - SN09262660 COMMUNITY - Maenclochog

HER DESCRIPTION -
A railway tunnel on the now disused GWR North Pembrokeshire railway branch line. In 1943 the tunnel was used to test the new 'highball' bouncing bomb, designed by Barnes Wallis who had created the bouncing bombs used in the Dambuster raids. The trials were considered successful with bombs entering the tunnel before exploding. The tunnel was repaired and reopened after the war before closing finally six years later. A Pyper 2017

NAME – CAWDOR BARRACKS  TYPE – MILITARY BASE  PERIOD – MODERN

EVIDENCE - COMPLEX  CONDITION - INTACT

NGR - SM84582460  COMMUNITY - Brawdy

HER DESCRIPTION -
A British army base was established on the site of the former Royal Air Force and Royal Naval Air Station at Brawdy (PRN 102001). The army barracks was established in 1995 and became the British base for electronic warfare with the 14th Signals Regiment Headquarters and 3 field squadrons based on the site. The army camp occupies part of the airfield site and has reused many of the earlier airfield buildings. A major new development project involved work on the site itself and also the construction of a 153 house estate at Crowhill in Haverfordwest. A new purpose-built operations block equipped with state of the art communications and electronic equipment was built and many existing airfield buildings refurbished. A new security fence has also been constructed. Another new addition to the site is the construction of inside firing range using laser equipment.
